Elegance in black steel

A conventional fireplace is reminiscent of a diva. It's unique, and can't be installed without careful planning or any additional construction work.

In contrast, the new, encased innovation by Rüegg, which is ready to install and called after the Latin tree name Celtis, blends seamlessly into the background. It combines the benefits of a wood-burning stove with the visual and technical advantages of a classic fireplace.

Made in Switzerland, the exquisitely crafted casing is simple and elegant in its beauty. Manufactured from 5 mm-thick steel, in two different shades of black, this purist wood-burning stove is the secret star of your sophisticated living space.

The benefits of Rüegg Celtis at a glance:

- Once delivered, Celtis **is installed in less than a day** and largely dust-free
- **Low space requirement:** Celtis can be installed on less than 1 m² of living space with a rear clearance of just 1 cm from flammable walls in accordance with fire regulations
- **Triple-sided glazing** allows for a perfect all-round view of the log fire
- **User-friendly** and **functional:** Exceptionally smooth panes stay clean for longer, and can just be unlatched for cleaning and then clicked back in just one movement – quickly and easily
- The clever spring steel seal closes the panes tightly at the corners and **prevents the smell of smoke**
- **Service-friendly** and **durable:** If a repair is required, all movable parts can be replaced without damaging the casing
- **Beautiful flame pattern** thanks to a clever combustion chamber design and precise combustion air supply
- **High efficiency level** and lower than average emissions / energy label A+
- Available in **two different looks:** natural black or chocolate black
- **Can be dismantled without damaging** the **device** (e.g. during home renovations)
- Available with optional **additional storage heating mass**
